

Learning Journal Template

Student Name: Aman Kumar

Course: SOEN 6841 Software Project management

Journal URL: <https://github.com/amannkumar/Weekly-Journal>

Week 1: Jan 18-Jan 27

Date: 27 Jan 2024

Key Concepts Learned:

Started learning backend development in NodeJS which is based on JavaScript language. Started off with covering basics in the programming language to working on OS paths, http modules and learning about sync vs async programming,

Application in Real Projects:

The learnings would help me become a better software developer by understanding the backend of the software.

Peer Interactions:

Discussing to participate in the cybersecurity hackathon hosted by Concordia.

Challenges Faced:

Challenges faced while learning the new backend language during development and in class trying to understand some practical examples for the class SDM.

Personal development activities:

Started surfing through the internet to find ways that would help in gaining real world experience.

Goals for the Next Week:

Set specific learning goals for the upcoming week.
Consider areas where you want to focus for deeper understanding.
Build projects on NodeJS and express. Focus on classes and getting internships.

Final Reflections:

Overall Course Impact:

The course until now has helped in the understanding of feasibility when it comes to software development.

Application in Professional Life:

Did not have the time to implement this in real life.

Peer Collaboration Insights:

Did not have any peer collaborations till now

Personal Growth:
